

## About Us

Switching and Control Engineering Ltd. was incorporated in 2005 by Tarek Serhan. The company specializes in manufacturing electrical panels that conform with Israeli standard 61439-2.

### Experience

The company is led by a CEO with over 30 years of experience in designing and constructing electrical panels, a skilled engineering team, and a highly experienced operations team.

### Distinguishing characteristics

The company leads the field in Israel with respect to the number of world-class brands it incorporates into its products.

The company is among the few in Israel with a license from the Standards Institution of Israel to manufacture panels using ABB equipment with no current limitation.

### Product Quality

We have selected to manufacture electrical panels using equipment from global leaders such as:

- Rittal
- ABB
- SIEMENS
- Schneider Electric
- EATON

The company maintains a quality management system in compliance with the ISO 9001: 2015 standard.

Each electrical panel displays a label from the Standards Institute of Israel listing its serial number to prevent counterfeiting.

### Machinery and Equipment

In recent years, the company has purchased machinery for automation and facilitation of manufacturing processes as well as for raising product quality and precision. This includes a computerized copper processing machine, a machine for cutting, stripping and pressing wires, and a machine for cutting carbonate caps, as well as various transport platforms.

### Our Vision

Make a positive impact in the field of electrical panel manufacturing with an emphasis on quality using products by leading global corporations, advanced equipment and automation, while adhering to high professional standards and providing fast turnaround.
